WINDS FOR PUERTO RICO WITH SUMMARIES
SAN JUAN 1971-1974

by

E.D. Wood

Four years of wind data were collected at the International Airport, San Juan, Puerto Rico, covering the period January 1, 1971 through December 31, 1974. The data contain wind direction to the nearest 10° for the direction the wind is blowing from, and velocity in knots. The data were taken hourly, twenty-four hours a day.

A quick inspection of the data shows that the wind rises in the southeast in the morning, shifts to northeast by noon, and returns to southeast in the evening. The highest velocities were from the northeast during the afternoon hours. The wind rarely blows from the directions 180° to 360°.

The number of times an event occurred (wind from a particular segment and its velocity) were summed for each month. The number of events were expressed as percent of the total time; the velocity for each segment averaged for each month; and, finally, for the year.

In averaging the direction and velocity for a particular hour of the day, the directions were totaled and divided by the number of events (a simple average). The periods of no wind were taken as 0° (north). The final answer may be a little low, but the error is small.

The results show that the wind was from the southeast the greatest amount of time with average velocities of about 6 knots. During the second major time period, the wind was from the northeast with the highest average velocities about 14 knots. An inspection of the data shows that the wind never blew from the same quadrant for more than 12 hours continuously.

The computer print-out following contains the program listing plus the raw data, monthly averages and summaries for the years 1971, 1972, 1973 and 1974. The wind was also tabulized by velocity frequency.

The general wind patterns for Puerto Rico are shown in Figures 1 and 2. Puerto Rico is affected by the Easterly Trade Winds. Cooling over the land occurs during nighttime conditions as shown in Figure 1. The cool air sinks and tends to blow seaward in its flow to the west. The night skies are usually clear over the land as clouds formed during the day are moved out to sea.

When the sun rises and begins to warm the land, the air rises and clouds form as shown in Figure 2. During the day, the air over the sea is usually clear or only partly cloudy while a series of rain clouds pass over the island.

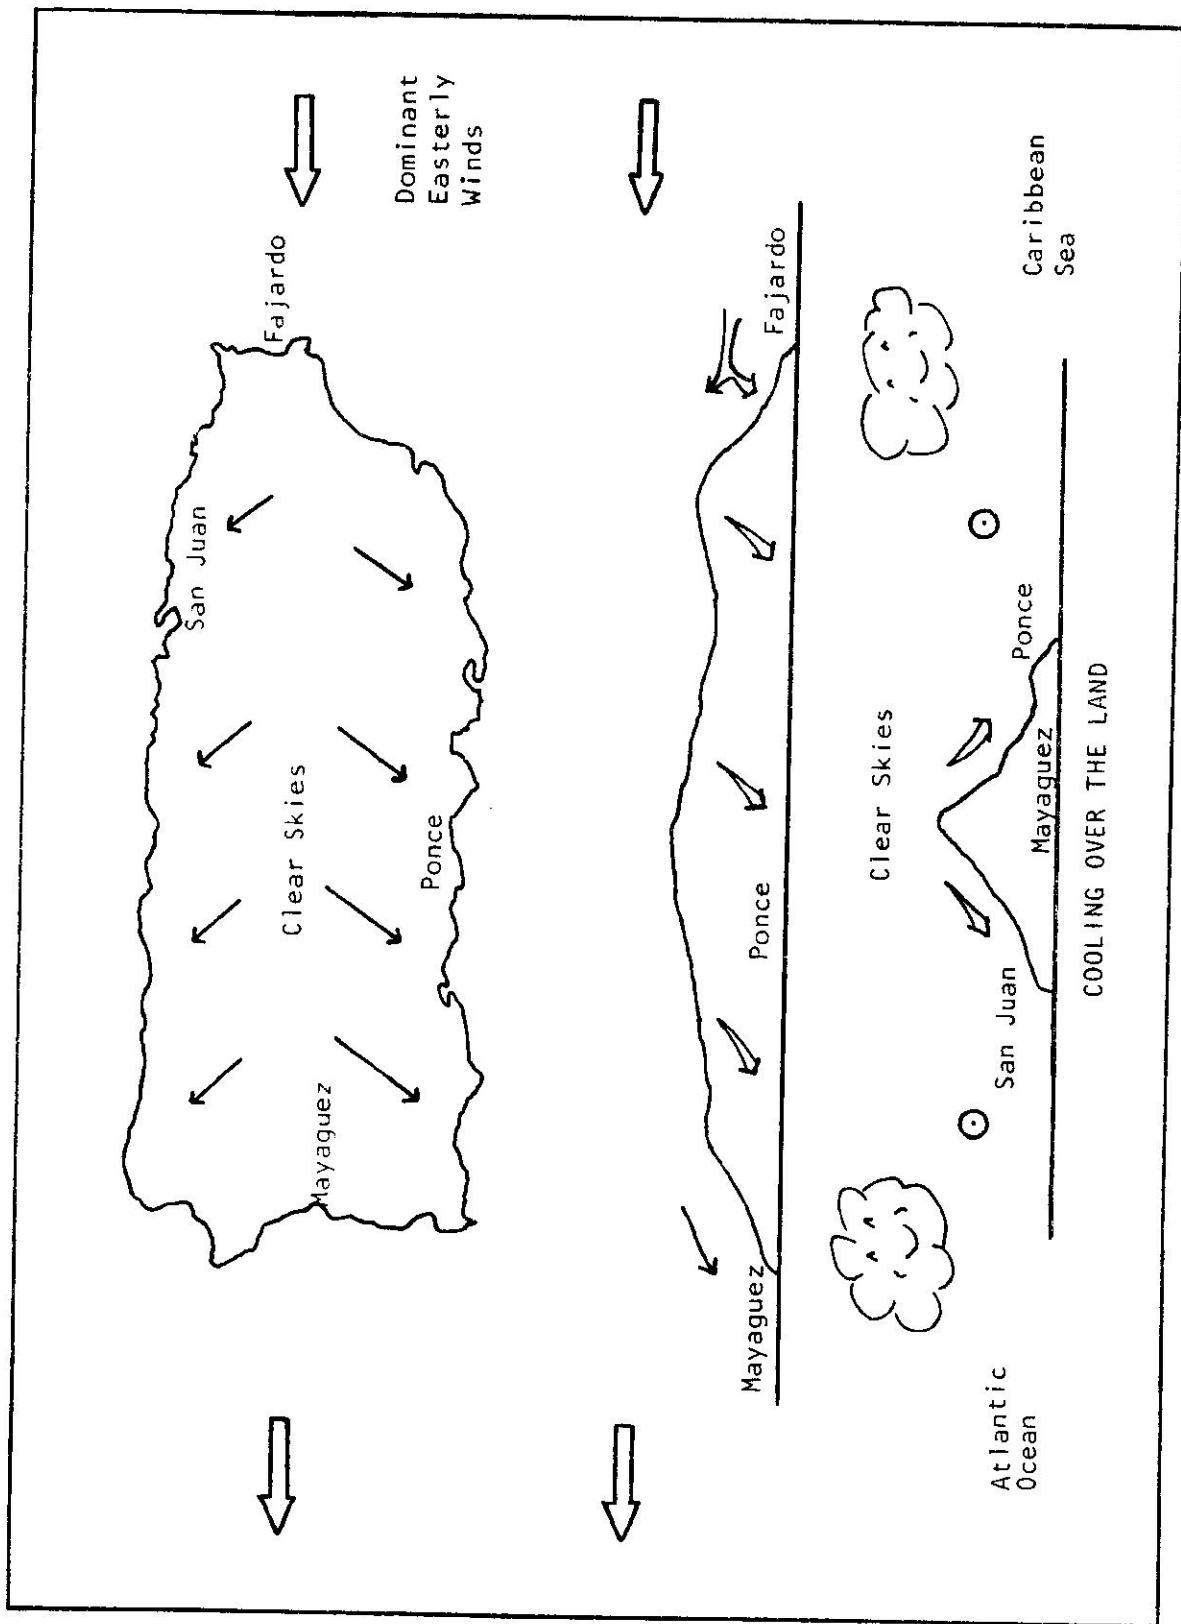

Fig. 1. Night time wind conditions.

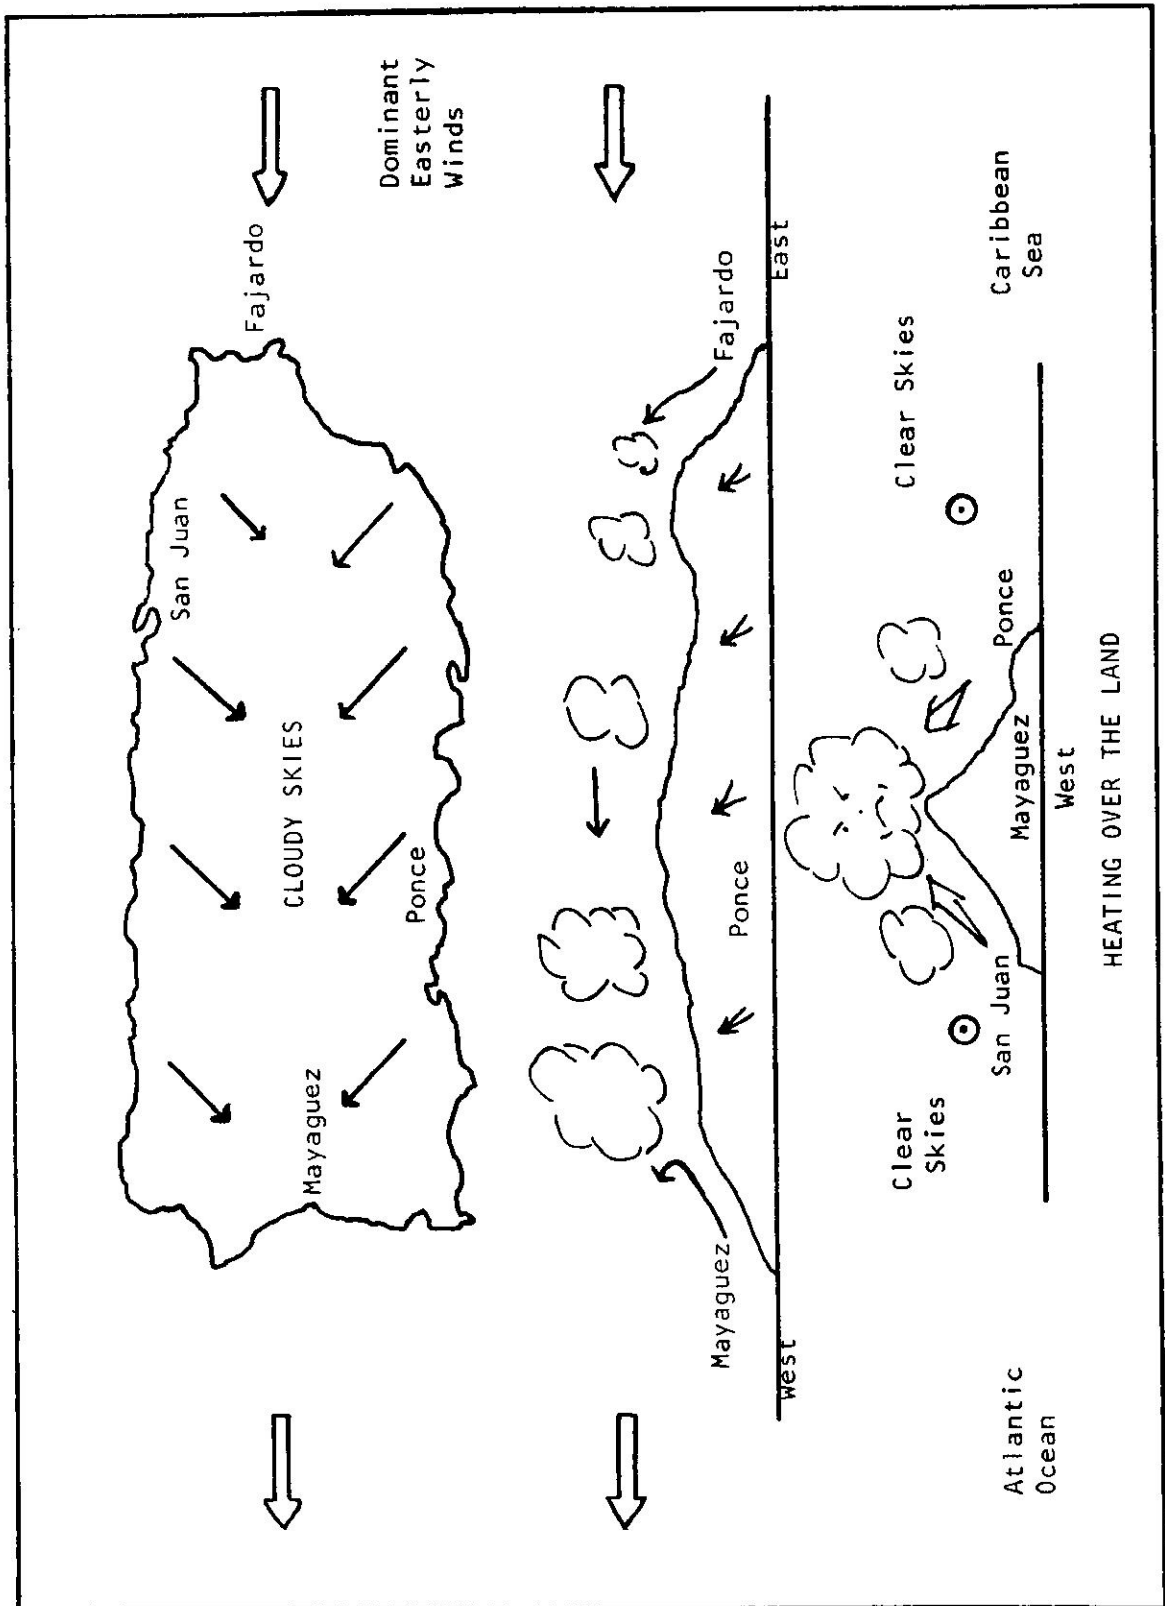

Fig. 2. Day time wind conditions

ACKNOWLEDGEMENTS

The raw data were supplied by the office of Dr. J. Colon of the National Oceanographic and Atmospheric Administration, Department of Commerce, San Juan, Puerto Rico. The computer program was written at the Puerto Rico Nuclear Center by John Kovarna with additions by Peter Willman. Data handling, including key punching of the data, was done by Rosa Asencio.

DATA PROGRAM

SAN JUAN 1971-1972
